BIBLIOGRAPHY ON COLD REGIONS SCIENCE AND TECHNOLOGY
Cumulative Author Index to Volumes 43–47

INTRODUCTION

This index is a cumulation of the annual author indexes to five volumes of the *Bibliography on Cold Regions Science and Technology* (43–47).

In anticipation of this cumulation (and the companion Subject index) the annual indexes have been bound separately rather than with the bibliography volumes, so they now may be discarded.

The index is arranged alphabetically by author. All principal and joint authors are included, both personal and corporate. Anonymous articles are listed under their titles.

The author's name is followed by the title of the paper. Titles are listed alphabetically. Initial articles (a, an, the) are omitted as a rule, but a small number of titles are listed with the article and are alphabetized accordingly. In case of foreign titles the English translation is given rather than the original title. The title is followed by the year of publication, the pagination, and the language in which the paper is written (in the case of translations, English is given as the language).

The item numbers listed after each index entry refer to the *Bibliography* section of the *Bibliography on Cold Regions Science and Technology*. The first two digits represent the volume number; these are followed by a hyphen and the sequential number within the volume.
